

DATA SHEET

Apparent Particle Density of Lightweight Aggregates

Apparent particle density of lightweight aggregates kit composed by graduated glass cylinder 86-D1006 and steel plunger 22-T0060/8

General description

This apparatus is used for quick determination of the apparent particle density of lightweight aggregates using a graduated measuring cylinder and a steel plunger with perforated plate as described in EN1097-6 (Annex E). The Standard specifies an alternative fast method only suitable for measuring times shorter than 5 min.

The testing kit is composed by:

- Graduated glass cylinder, 1000 ml capacity code 86-D1006. Weight approx.: 0,6 kg
- Steel plunger with perforated plate code 22-T0060/B. Weight: 0.4 kg (approx.)

Standards

- EN 1097-6
