

DATA SHEET

Emulsified Asphalt Distillation Apparatus

81-B0153

General description

Used to examine the asphalt emulsions composed principally of a semi-solid or liquid asphaltic base, water and an emulsified agent. The apparatus consists of an aluminium-alloy still with ring burner, a glass connecting tube with water-cooled condenser, a graduated cylinder 100 ml cap, support stands, holders and two thermometers range -2 to 300°C.

- Weight approx.: 9 kg

Standards

- ASTM D244
- AASHTO T59
- EN 1431
- ASTM D6997
